

RAJK

Java Developer | SDE-1

Bengaluru, Karnataka • rk4790385@gmail.com • 9972618146

[Portfolio](#) • [GitHub](#)

PROFESSIONAL SUMMARY

B.E. graduate in Artificial Intelligence and Data Science (2022–2026), currently completing a structured Java Full Stack Development training program at KodNest Technologies. Built four independent projects spanning full-stack web development (React, TypeScript, Supabase), desktop application development (Python/Tkinter), and applied machine learning (CNN-based image classification with TensorFlow/Keras). Comfortable working across the stack, with knowledge of data structures and algorithms, object-oriented programming, UI development, and database design. Seeking a Java Developer / SDE-1 role to apply and grow these skills in a production engineering environment.

TECHNICAL SKILLS

Languages: Java (Core), Python (Basics), TypeScript, JavaScript, SQL

Web & Frontend: React, HTML, Vite

Backend & Database: MySQL, REST APIs

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Manual Testing

Tools: Git, GitHub, Vercel

PROJECT EXPERIENCE

Health-care Management System

TanStack Start, React, Supabase (PostgreSQL)

- Built a healthcare management web application using TanStack Start and React for the frontend, with Supabase (PostgreSQL) handling data persistence and backend services.
- Designed database schema and migrations in Supabase to structure hospital- and patient-related records.
- Deployed the application as a live, publicly accessible web app via Vercel.

Employee Management System

React, TypeScript, Vite, Supabase (PostgreSQL)

- Developed a full-stack employee management application using React and TypeScript for the UI, with Supabase providing database and backend functionality.
- Designed a PostgreSQL schema in Supabase for structured employee data storage and retrieval.
- Deployed the application to Vercel for public access.

Plant Disease Detection Using CNN

Python, TensorFlow, Keras, OpenCV, Flask

- Built a Convolutional Neural Network (CNN) model in Python using TensorFlow and Keras to classify plant leaf images by disease type.
- Used OpenCV, NumPy, Pandas, and Matplotlib for image preprocessing, data handling, and result visualization during model development.
- Developed a Flask-based web interface allowing users to upload a leaf image and receive a real-time disease prediction from the trained model.

Cafe Management System

Python, Tkinter, Pillow

- Collaborated on a desktop cafe management application built with Python and Tkinter, covering order entry and billing workflows.
- Used Pillow for image handling within the interface and Python's messagebox module for user notifications and alerts.

TRAINING & CERTIFICATIONS

Java Full Stack Development — KodNest Technologies

Feb 2026 – Present

Bengaluru, Karnataka, India • Paid, curriculum-based training program • Certificate on completion

- Completing a structured Java Full Stack Development training program covering Core Java, MySQL, frontend technologies (HTML, React), and manual testing.
- Applying concepts learned in the program directly to independent projects (see Project Experience) to build practical, portfolio-verified skills.

EDUCATION

Government Engineering College, Bidar — Bachelor of Engineering (B.E.), AI & DS

2022 – 2026

CGPA: 6.97

Languages: English (Fluent), Hindi (Fluent), Telugu (Advanced), Kannada (Advanced)
